I was inquiring for staff from our MO Dept. of Health who you spoke with on Monday. We thought it might be beneficial to get them onsite to give them a better perspective of site monitoring. I will talk with them to see how they would like to proceed and get back with you.

Thanks,

Actually Conetec received their GERT training this week in New Jersey since they were close to an Auxier's office. They are arriving next Tuesday (12th), and I hope to start Tuesday PM with the cones. Mike Bollenbacher and Paul Eastvold will be there Tuesday at the trailer, so perhaps we can just do a small group Tuesday AM in the construction trailer. I want to spend some time Tuesday AM reviewing the device and discussing protocol outside the controlled area.

Let me know your thoughts. We could also do a web conference type training.

Thanks Dan.

Do you have a date set for Conetec worker training? Please keep me apprised on the training schedule. We might have additional staff who need to attend (maybe 2 or 3 at the most).

I looked at the radar and it is calling for heavier rain this am, but clearing this PM. With the slight possibility of storms, I am going to call off today.

Paul can you call James and let him know? Shawn – if you were going to have the MDNR folk out, can you call them off?

We made real good progress yesterday, and now have the main alignment rocked from fence to fence. We are have several of the longer paths completed, so I think we will have about 85-90% of the paths completed by end of Friday. Conetec is coming in on Tuesday.

We will NOT be working Veterans day.

Thank you,
Dan
